

## WHAT IS ECSTASY?

Ecstasy, or “E”, is the designer drug of the 90’s. Besides being a potent stimulant and mild hallucinogen, it is psychologically addictive – meaning that the user can become dependent after experiencing a “high” while on the drug.

Ecstasy is known as the “party / dance/ love drug”, and is extremely popular at rave or trance parties where techno, house or trance music is played all night through.

Users see, hear and feel things differently to what they are - called (hallucinating), experience the music as extremely “meaningful”, fills them with energy besides increasing their staying power. Many users can jive/dance the entire night through

## HOW DO I IDENTIFY IT?

The tablet, or capsule, comes in varying sizes and colors, the original having been white with a peace dove on it. Many, nowadays, are similar in appearance to Panado.

As Ecstasy is illegal, it may be mixed (cut) with other physically addictive substances such as tranquilizers, amphetamines and codeine, heroin, cocaine, rat poison, chalk, caffeine and aspirin.

## WHAT ARE THE SYMPTOMS?

- ✚ Dry mouth
- ✚ Decreased sleeping, resting, appetite
- ✚ Dilated pupils
- ✚ Decreased co-ordination
- ✚ Sweating
- ✚ Muscle spasms
- ✚ Unsteadiness
